Select Research Projects

Modelling Spread of Hate Speech Advisors: Dr. Amit Nanavati , Dr. Seema Nagar (IBM Research India) ➢ Worked on a novel model to capture the spread of hate speech on Twitter. Our model is based on user behaviour and captures two important factors: a) toxicity exists as a spectrum, i.e. hate is not binary, and b) toxicity is not conserved in a network. [Full Paper@CODS-COMAD'24] ➢ We extended this work by studying toxicity as a time series and forecasted it using transformer-based models and graph CNNs. While network structure matters, we found that explicit connections may not always imply influence. [Full Paper@IEEE CogMI'23] ➢ An in-depth empirical analysis led us to find users change behaviour with time. Developing a model that captures this finer phenomenon gives us better insights into creating strategies to mitigate hate speech. [In Submission]	Aug'22 - Present
