## Select Research Projects

<b>Modelling Spread of Hate Speech</b> Advisors: <a href="#">Dr. Amit Nanavati</a> , <a href="#">Dr. Seema Nagar</a> → Worked on a novel model to capture the spread of hate speech on Twitter. Our model is based on user behaviour and captures two important factors: a) toxicity exists as a spectrum, i.e. hate is not binary, and b) toxicity is not conserved in a network. [ <a href="#">Full Paper@CODS-COMAD'24</a> ] → We extended this work by studying toxicity as a time series and forecasted it using transformer-based models and graph CNNs. While network structure matters, we found that explicit connections may not always imply influence. [ <a href="#">Full Paper@IEEE CogMI'23</a> ] → An in-depth empirical analysis led us to find users change behaviour with time. Developing a model that captures this finer phenomenon gives us better insights into creating strategies to mitigate hate speech. [ <a href="#">In Submission</a> ]	Aug'22 - Present
